

Description:

Browning ProSteel Safe Storage Solutions

People buy a gun safe to store their firearms and other valuables. Because most people cannot buy multiple safes or build a huge vault to hold a growing collection, a better safe should maximize storage capacity for the owner. Browning ProSteel safes include revolutionary design features that allow the safe to hold more — whether long guns or other small items. Instead of just having an “interior” like other safes, Browning safes have a Storage System to store more valuables and allow easier access to the safe contents.

Duo-Plus Storage Systems

Many safe brands include a convertible interior, which allows the storage configuration inside the safe to be changed over time as the owner’s needs evolve. Browning ProSteel safes introduced the concept of the Duo-Plus Interior (patent pending). The Duo Interior is Browning’s convertible interior, and the “Plus” is to utilize the inside of the safe door to easily and efficiently store more in the safe. Hence the “Duo-Plus” system includes a convertible interior shelving/rack arrangement, and innovative solutions to fully utilize the valuable space on the back of the door to hold more valuables.

The Duo-Plus concept is used in several different versions to create flexible and easy-access storage. These versions include the Duo-Plus Extra (DPX) and Duo-Plus Handgun (DPH) Storage Systems. No other safe company offers as many versatile storage options on so many of their safe models.

Each series of safes has a standard interior/storage system. The specifications for each model include the type of interior and the long gun capacity for that particular model.

The gun capacity description is a series of two or three numbers, for example 11/22+7. The first number is the long gun capacity of the interior portion of the safe with part of the space used for shelves (11 in the example). The second number is the interior long gun capacity if the shelves are removed (22 in the example). The “Plus” number (+7 in the example) is the long gun capacity on the back of the door. The door back capacity can

be used to store long guns whether or not shelves are used in the interior.

Different safe models in the same Series (Medallion for example) will have a different size interior of the standard configuration for that series.

The actual interior size/capacity is shown in the specifications by model.

The Duo-Plus Extra (DPX) Storage System (patent pending) includes:

- Long gun storage on the door back
- A system of pouches and pockets to store small valuables on the door back
- Two Handgun Loops to store handguns on the door back
- A convertible Duo Interior system inside the safe with both shelves and long gun capacity

The DPX Deluxe System is standard on the following safe series:

- Platinum Plus
- Gold
- Medallion

The Standard DPX System is standard on the following safe series:

- Sterling
- Copper

The Half DPX System is standard on the following safe series:

- Bronze

DPX Mossy Oak® Break-Up® Camo (Factory-Installed Only)

Camo lovers will be excited by the new Browning ProSteel Safes Mossy Oak Break-Up camo DPX and DPH Storage Systems.
